

# Jan 8 2024

## Meeting Minutes of Jan 8 2025

### Attendees:

Ashley, Ben C, Ben D, Spencer, Adam

### Meeting Goals:

- picking a project topic
- deciding roles, when team meetings are to happen
- decide on technical tools being used throughout the project
- create github page

### Notes:

Meeting began with a discussion of the various different projects proposed by both the professor and a discussion of personal ideas.

We all agreed upon implementing the third project - a online shop website

A discussion of the various types of software tools was also discussed, followed by a demo by Ben C of angular. We came to the conclusion that his demo was the best route to take going forward with the projects frontend development. We followed up with a discussion on the whole stack and concluded going forward we will be working with a typescript/ angular and C# with a .NET API gateway. We also looked at SQL as our database.

Went over when meetings should be taking place and settled on 3 scrum meetings a week taking place at 9:30 -10:30 Mondays and Fridays, and 2:30 -3:30 on Wednesdays to accommodate everyone's schedules.

Went over different roles and decided on Ben C as scrum master, and a frontend / backend developer. Ashley as product owner, handling documentation and frontend, Ben D as a developer, frontend/ backend and possibly looking into a mobile version of our site if feasible. Adam as a

developer, handling backend and database work. Spencer as a developer handling frontend and backend work.

A git repository was also created and all members were added.

For next Meeting:

Friday jan 10 2025

goal: review the progress on the proposal, and discuss final details
