jan 10 2024

Attendees

  ben C, Ashley. Adam, Ben D, Spencer

Meeting goals

- review project proposal discuss next steps

- structure of the project

Notes

Meeting started with a small discussion of the project proposal. Then followed up with Ben C providing a demonstration of the various technical tools we will be using throughout the duration of the project.

The demo included a backend showcase in which .NET and C# was shown with an explanation of the main program, program.cs, API's will be put into controllers, models will have classes. . To get the software running, it can be run through git-bash or cmd with .net run, with the local host to 5000. The front end demonstration included how to set it up within the IDE and various ports to get angular and the front-end running, ng serve is the equivalent run. Ben also went through the environment set up (development and production) and the app which includes components. app-root is the main component. It was also mention that node is needed to run with npm.

the second topic of discussion was the project proposal, a draft has partially been made by Ashley, review of the draft and a discussion on timings of sprints was also talked about. With the group agreeing on the proposed timings of sprint due dates being agreed upon as a week before progress reports are due in. Some small additional editing was included with the conclusion. Once the proposal was finished all members would review the proposal and edit anything that needed to be changed or further expanded.

Next Meeting: jan 13 2024

- Tutorial on setting up the software from ben

- discussion on the release planning and task to be logged with an explanation on jira
