Feb 26 2025- Sprint review

Attendees:

Ashley, Adam, Braden, Steven, Ben D, Ben C, Spencer

SPRINT TWO REVIEW

Review Notes →

Did we meet the goals we wanted to achieve?

Our team went through our jira board and the tasks that were achieved and what was not and discussed what could be done in the future to ensure we are meeting our goals for each of the sprints. Each member discussed what they did for the sprint and showcased what had been for the sprint. Discussed what was finished in the sprint and was was not and how we want that to work going forward.

What do we want to prioritize moving forward → getting the store layout, fake data, custom url

Retrospective Review →

Did our approach to the scrum process satisfy everyone? Are we satisfied with the amount of meetings that we are holding per week, the amount of work we are doing per week, what we speak about during the meetings and the length of the meetings.

So far the team is happy with the amount of meetings that we are having each week and the length of the meetings. When discussing the amount of of work being done per sprint, the team feels that we could take on more work to do during each of the sprints. With Braden and Ben D mentioning specifically that they want more to do with sprint.

Are we implementing our tools in the best way and using them to effectively?

The team discussed our use of Jira, Discord and GitHub. In terms of Jira, Ben D mentioned that he would like jira tickets to be more specific so he has a better idea what is being asked of him. GitHub was also discussed with the team agreeing that we should change the contributors page to showcase staging instead of our main branch to show all the individual commits that each member is doing to ensure we are meeting the TA's advice from our progress review meeting. We also discussed even if the work is not completely finished push the work to GitHub to ensure each member has commits. The team also discussed the difficulties we have been having with understanding the stack and the software that is involved with it and how understanding it took a while for everyone using it to understand.

Comments the group would like to share on how they will be improving in the next sprint.

In terms on of time management, how to be more productive, how can we better communicate as a group. how can we improve for the next sprint

On this point Ben C mentioned that for better time management and better production on the project if someone is having problems with angular or having problems in general then reach out to Ben for help to ensure that there aren't days or more time than necessary spent on problems that could be worked out together.

Are there other thoughts that the group would like to add to to the review?

In general the group is happy with how the project is coming along.
